

Catalog Number:	RA18014	Host:	Rabbit
Product Type:	Affinity purified antibody	Species Reactivity:	Rat, Mouse, Human
Immunogen Sequence:	synthetic peptide (KLH coupled) corresponding to residues around amino acid 400 of human parkin. Antibodies are purified by protein A and peptide affinity chromatography.	Format:	Liquid in 10mM sodium HEPES (pH7.5), 150mM NaCl, 100ug BSA and 50% glycerol
Applications:	Western blotting 1:1000 Immunoprecipitation 1:50 Immunocytochemistry 1:600 Dilutions listed only as a recommendation. Optimal dilution should be determined by investigator.		
Storage:	Store at -20°C. Do not aliquot.		

Application Notes

Specificity/Sensitivity: Parkin Antibody detects endogenous levels of total parkin protein.

Western Blot Protocol

Sample Preparation

1. Treat cells by adding fresh media containing regulator for desired time.
2. Aspirate media from cultures; wash cells with 1X PBS; aspirate.
3. Lyse cells by adding 1X SDS sample buffer (100 µl per well of 6-well plate or 500 µl per plate of 10 cm plate). Immediately scrape cells from plate and transfer the extract to a microcentrifuge tube. Keep on ice.
4. Sonicate for 10–15 seconds to shear DNA and reduce sample viscosity.
5. Heat a 20 µl sample to 95–100°C for 5 minutes; cool on ice.
6. Microcentrifuge for 5 minutes.
7. Load 20 µl onto SDS-PAGE gel (10 cm x 10 cm).
8. Electrotransfer to nitrocellulose (or PVDF) membrane.

Membrane Blocking and Antibody Incubations

Note: Volumes for 10 cm x 10 cm (100 cm²) membrane; for different sized membranes, adjust vol. accordingly.

1. (Optional) After transfer, wash nitrocellulose membrane with 25 ml TBS for 5 minutes at room temperature.
2. Incubate membrane in 25 ml of blocking buffer for 1 hour at room temperature.
3. Wash three times for 5 minutes each with 15 ml of TBS/T.
4. Incubate membrane and primary antibody (at the appropriate dilution) in 10 ml primary antibody dilution buffer with gentle agitation overnight at 4°C.
5. Wash three times for 5 minutes each with 15 ml of TBS/T.
6. Incubate membrane with HRP-conjugated secondary antibody (1:2000) in 10 ml of blocking buffer with gentle agitation for 1 hour at room temperature.
7. Wash three times for 5 minutes each with 15 ml of TBS/T.
8. Process membranes using enhanced chemiluminescence.

8/04v1

Immunoprecipitation Protocol**Sample Preparation**

1. Aspirate media. Treat cells by adding fresh media containing regulator for desired time.
2. To harvest cells under non-denaturing conditions, remove media and rinse cells once with ice-cold PBS.
3. Remove PBS and add 0.5 ml 1X ice-cold cell lysis buffer plus 1 mM PMSF to each plate (10 cm) and incubate the plate on ice for 5 minutes.
4. Scrape cells off the plate and transfer to microcentrifuge tubes. Keep on ice.
5. Sonicate on ice four times for 5 seconds each.
6. Microcentrifuge for 10 minutes at 4°C, and transfer the supernatant to a new tube. The supernatant is the cell lysate. If necessary, lysate can be stored at -80°C.

Immunoprecipitation

1. Take 200 µl cell lysate and add primary antibody; incubate with gentle rocking overnight at 4°C.
2. Add protein A agarose beads (20 µl of 50% bead slurry). Incubate with gentle rocking for 1–3 hrs at 4°C.
3. Microcentrifuge for 30 seconds at 4°C. Wash pellet five times with 500 µl of 1X cell lysis buffer. Keep on ice during washes.
4. Resuspend the pellet with 20 µl 3X SDS sample buffer. Vortex, then microcentrifuge for 30 seconds.
5. Heat the sample to 95–100°C for 2–5 minutes.
6. Load the sample (15–30 µl) on SDS-PAGE gel (12–15%).
7. Analyze sample by Western blotting (see Western Immunoblotting Protocol).

Solutions and Reagents for Western Blot and Immunoprecipitation

Note: Prepare solutions with Milli-Q or equivalently purified water.

*1X Phosphate Buffered Saline (PBS)**1X SDS Sample Buffer:*

62.5 mM Tris-HCl (pH 6.8 at 25°C), 2% w/v SDS, 10% glycerol, 50 mM DTT, 0.01% w/v bromophenol blue or phenol red

3X SDS Sample Buffer:

187.5 mM Tris-HCl (pH 6.8 at 25°C), 6% w/v SDS, 30% glycerol, 150 mM DTT, 0.03% w/v bromophenol blue

1X Cell Lysis Buffer:

20 mM Tris (pH 7.5), 150 mM NaCl, 1 mM EDTA, 1 mM EGTA, 1% Triton X-100, 2.5 mM Sodium pyrophosphate, 1 mM b-Glycerolphosphate, 1 mM Na₃VO₄, 1 µg/ml Leupeptin. *Note: Addition of PMSF before use is suggested.*

Transfer Buffer:

25 mM Tris base, 0.2 M glycine, 20% methanol (pH 8.5)

10X Tris Buffered Saline (TBS):

To prepare 1 liter of 10X TBS: 24.2 g Tris base, 80 g NaCl; adjust pH to 7.6 with HCl (use at 1X).

*Nonfat Dry Milk (weight to volume [w/v])**Blocking Buffer:*

1X TBS, 0.1% Tween-20 with 5% w/v nonfat dry milk; for 150 ml, add 15 ml 10X TBS to 135 ml water, mix. Add 7.5 g nonfat dry milk and mix well. While stirring, add 0.15 ml Tween-20 (100%).

Wash Buffer:

1X TBS, 0.1% Tween-20 (TBS/T)

*Bovine Serum Albumin (BSA)**Primary Antibody Dilution Buffer:*

1X TBS, 0.1% Tween-20 with 5% BSA; for 20 ml, add 2 ml 10X TBS to 18 ml water, mix. Add 1.0 g BSA and mix well. While stirring, add 20 µl Tween-20 (100%).

Protein A Agarose Beads:

Add 5 ml of 1X PBS to 1.5 g of protein A agarose beads. Shake 2 hours at 4°C; spin down. Wash pellet twice with PBS. Resuspend beads in 1 volume of PBS. (Can be stored for 2 weeks at 4°C.)

8/04v1

Immunocytochemistry (ABC)**Fixation**

1. Prepare 4% paraformaldehyde.
2. Treat cells as desired.
3. Quickly wash cells once with cool or room temperature 1X PBS.
4. Immerse cells in 4% paraformaldehyde for 30-60 minutes at 4°C.
5. Aspirate fixative/permeabilizer and wash 3 times for 5 minutes each with 1 ml 0.1% Triton X-100, TBS.
6. Aspirate, then incubate with 1 ml Dilution Buffer for 45–60 minutes at room temperature.

Staining

1. Aspirate, then incubate with primary antibody at suggested dilution in Dilution Buffer overnight at 4°C.
Note: When using any primary antibody for the first time, titrate out the primary to determine which dilution allows the strongest specific signal with the least background.
Note: You may wish to leave one slip for a secondary antibody only control, and to provide another slip incubated in normal serum from the host animal (rabbit for polyclonals and mouse for monoclonals) instead of the primary antibody.
2. Wash two times for 5 minutes each with 1 ml 0.1% Triton X-100, TBS.
3. Incubate with biotinylated secondary antibody (diluted appropriately in Dilution Buffer; 1:500 for secondary antibody from Vectastain ABC Kit) for 1 hour at room temperature.
4. Wash three times for 5 minutes each with 1 ml 0.1% Triton X-100, TBS.
5. Wash once for 5 minutes with 1 ml TBS.
6. Incubate for exactly 30 minutes in 0.6% H₂O₂ at room temperature.
7. Wash three times for 5 minutes each with 1 ml 0.1% Triton X-100, TBS.
8. Wash once with TBS.
9. Incubate for 1 hour with 0.5–1.0 ml ABC Reagent at room temperature. (Add 2 drops solution A into 5 ml PBS, mix, then add 2 drops solution B, mix.)
10. Wash two times for 5 minutes each with 1 ml TBS.
11. Add 1 ml DAB Reagent. Monitor reaction progress under the microscope. Reaction may proceed for 10 minutes.
12. Terminate reaction by adding an equal volume of water.
13. Aspirate and wash once with 1 ml of water.
14. View cells in 6-well plate or mount coverslips.

Solutions and Reagents for Immunocytochemistry

Note: Prepare solutions with Milli-Q or equivalently purified water.

1X Phosphate Buffered Saline (PBS)

Fetal Bovine Serum (FBS)

4% Paraformaldehyde:

Prepare day of use either from commercial 16% stock solution or by dissolving paraformaldehyde in 1X PBS by heating at 60°C and stirring until it dissolves. Cool before use.

Tris Buffered Saline (TBS):

50 mM Tris-HCl (pH 7.4), 150 mM NaCl

0.1% Triton X-100:

Prepare stock of 20% Triton in TBS; rotate tube overnight to dissolve. Dilute to 0.1%

Dilution Buffer:

5% normal horse, donkey or goat serum in 0.1% Triton X-100, TBS. Normal serum should be from same species as secondary antibody

0.6% Hydrogen Peroxide:

200 µl 30% H₂O₂ in 10 ml TBS

ABC Reagent (Vectastain ABC Kit, Vector Laboratories, Inc., Burlingame, CA):

Prepare according to manufacturer's instructions 30 minutes before use.

DAB Reagent:

Add 6.7 µg of 30% hydrogen peroxide to 10 ml dH₂O; add this mixture to 10 ml of 1 mg/ml DAB (diaminobenzidine tetrahydrochloride) in PBS, filter.
